DVR Live Viewing

Access Control

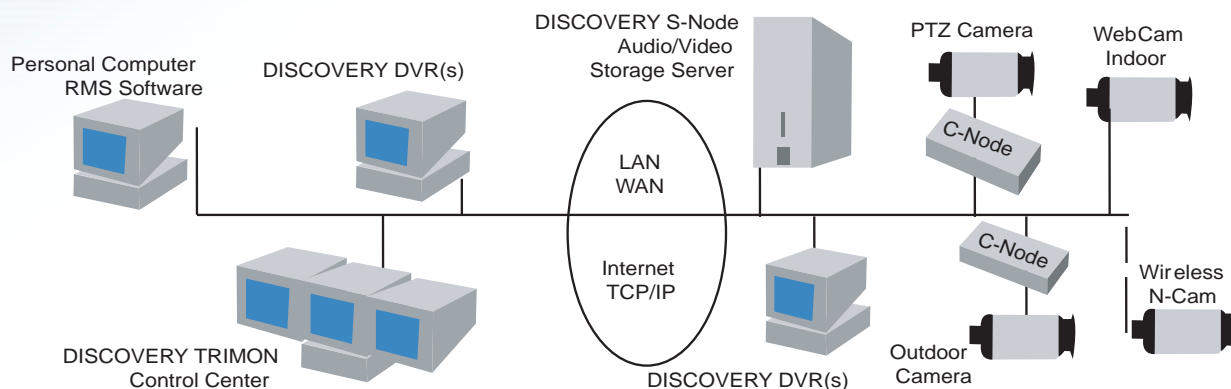

Multi-Screen Display Connects up to 16 Sites per Screen

Connect quickly to multiple networked Galaxy surveillance servers or networked web cameras simultaneously to view live video and playback. (Servers can be anywhere on your LAN, WAN, or Internet.)

Create Unlimited Groups of up to 16 Cameras in a Custom Display per Screen

Select up to 48 cameras from any networked Galaxy DVR, C-Node (web server) or web camera to include in each multiplex display of 1, 4, 8 or 16 views. Modify your camera choices and display at any time. You can even leave multi-remote access running under most applications for pop-up viewing. After creating a group, save it in the Group Manager library for recall at any time. Simply click on the name, up to 16 cameras are connected, and you access live or recorded video.

Note: This system is for control and viewing of DISCOVERY DVR camera servers.
It does not support direct camera connection.
