

Galaxy Minimum Requirements for VM Environments

Updated: JULY 2024

This document specifies minimum requirements for running System Galaxy v11.X and GCS Services in a Virtual Environment, such as VMware® vSphere/vCenter, or MS Hyper-V®.

Virtual Machine and OS Specifications are minimum recommendations ...

Processor: 16 Cores

RAM: 24 GB

Database: MS-SQL 2016 | 2019 | 2022 (with latest service packs)

Operating System:

- Microsoft® Windows-10 | Windows-11 (64bit with latest Windows updates)
- Microsoft® Windows Server® 2016 | 2019 | 2022 (with latest service packs)

(1) System Galaxy Software is supported as a *diagnostic application* on Windows Server® OS.

IMPORTANT: No claims are made, express or implied, on behalf of 3rd party applications, drivers and devices concerning operating system limitations system requirements and VM compatibility. Refer to manufacturer's documentation for additional information.

NOTICE: Galaxy Control Systems does not provide technical support for VMware® or Microsoft® Hyper-V. Contact the appropriate manufacturer for information concerning your virtual environment.
