System Galaxy v11 Operating System Requirements (VM)

Date of Notice: October 2019

This document specifies the current OS Requirements for running System Galaxy in a Virtual Environment such as VMware® vSphere/vCenter, or MS Hyper-V®.

System Galaxy software** and its core GCS Services are compatible with VMware® vSphere / vCenter. [** *applies to SG v11 or higher*]

> IMPORTANT: Galaxy Control Systems does not provide technical support for VMware® or for Microsoft® Hyper-V. Contact the appropriate manufacturer for information concerning your virtual environment.

System Galaxy software [1], databases, services, and integrated applications are supported as follows:

Processor: Minimum 4 cores
RAM: 24 GB
SQL: 2014 |2016 | 2019 (with latest service packs)

Operating Systems:

- Microsoft® Windows-8 Pro [64-bit] | Windows-10 [64-bit]
- Microsoft® Windows Server® 20012 |2016 | 2019 (with latest service packs)

(1) **System Galaxy Software** is supported as a *diagnostic application* on Windows Server® OS.

NOTICE: Since operating environments can vary from customer to customer, it is important to remember that PC and system requirements may vary depending on the needs of co-existing applications in a given environment.

IMPORTANT: No claims are made, express or implied, concerning operating system limitations and compatibility, or system requirements on behalf of 3rd party applications, drivers and devices. Refer to manufacturer's documentation for additional information.
