

# Access in the Cloud

## GALAXY CONTROL SYSTEMS

### Contact

Contact authorized Galaxy dealers to discuss general implementation & costs of the project. Most properties will have the same hardware, but may differ in installation costs.

### System Operation

1

Individual residential units located within the local city (and elsewhere) are connected to the Galaxy Hosting Service via the internet.

2

Authorized users have access to doors using credential.

All activity is logged and fully reportable

3

4

System changes are made via SGWeb and/or SG Mobile

### Design

To reduce installation costs & allow system hardware to be transferred to other properties as needed, wireless locking hardware should be used. These locks have all of the necessary components built-in & communicate wirelessly to the local access control panel (ACP)

### Equipment

Each unit will have at a minimum:

QTY (1) Galaxy ACP  
QTY (?) Wireless Lock(s)

### System Benefits

#### **Flexible**

Grow the system as needed.

#### **Ease of Use**

Changes made via web

#### **Future Proof**

Automatic upgrades

#### **Low Cost of Ownership**

No computer system required

#### **Reliable**

- Systems backed-up daily.
- Full local access functionality when offline.
- All system activity uploaded when restored.

**PROVEN**
