Visitors can access a property with their mobile phones when a QR bar code is granted by an employee.

OPEN API

A RESTful API allows for a feature rich integration with 3rd party software.

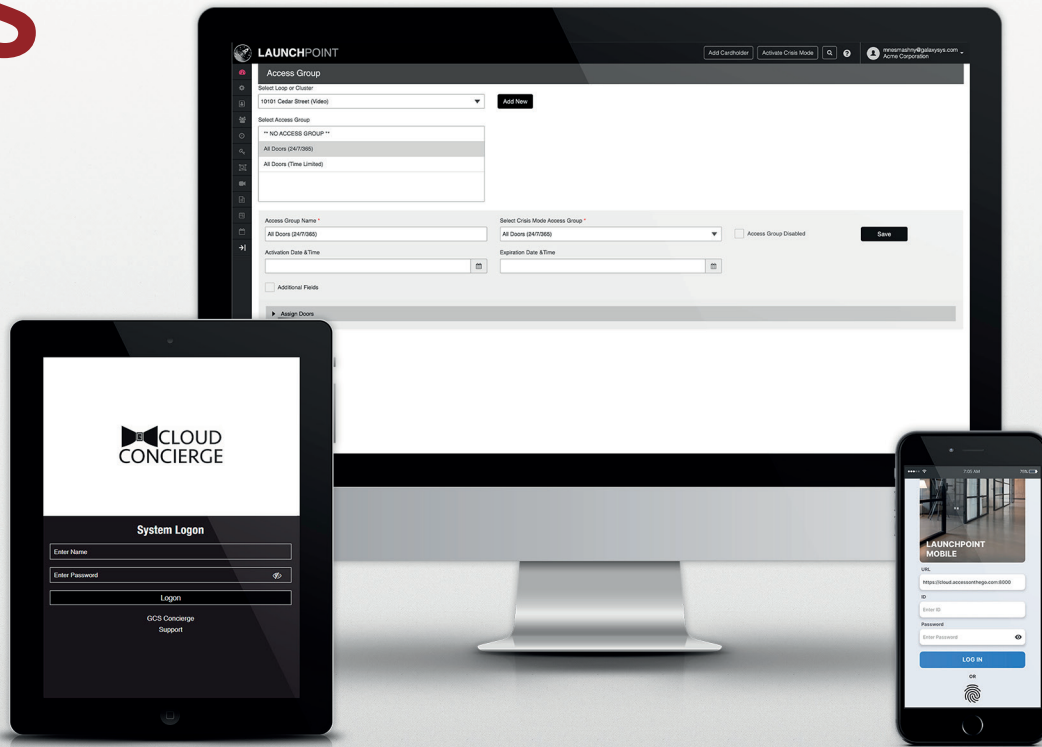

SOFTWARE & SYSTEM

Peace of Mind

Galaxy will manage all system requirements and keep everything up-to-date and secure.

- Automatic database backups
- Automatic software upgrades
- Automatic security patches
- System Redundancy

HOW SUITE IT IS

LAUNCHPOINT™ WEB APP OVERVIEW

Internet based access control built with simplicity in mind. Wizard-driven menus allows for system management with minimal training.

Responsive design allows access from anywhere in the world via a desktop, tablet or mobile phone.

FEATURES

- **Integrated Video:** Allows automated retrieval of video based on access control events with a click of a button.
- **Mobile Credentials:** Employees can use their mobile phones as virtual credentials to access a building.
- **Badging:** Create badges from the web and print locally or remotely. Works with most cameras and printers.
- **Live Events:** View live events as they occur. Enroll cards not in the system from live event screen.
- **Personnel:** Users can search, enroll, and maintain cardholders as well as set access privileges.
- **Door Control:** Operators can remotely lock and unlock doors or put them on a schedule.
- **Reports:** Create custom reports and schedule them for automatic email delivery.
- **Passback:** Prevent credentials from being shared.
- **Mustering:** Identify which area an employee is in.
- **Granular access:** Designate employee access according to group, time, day of week and holiday.
- **Multi-tier Operator Level:** System users can be restricted to local, regional or global access.

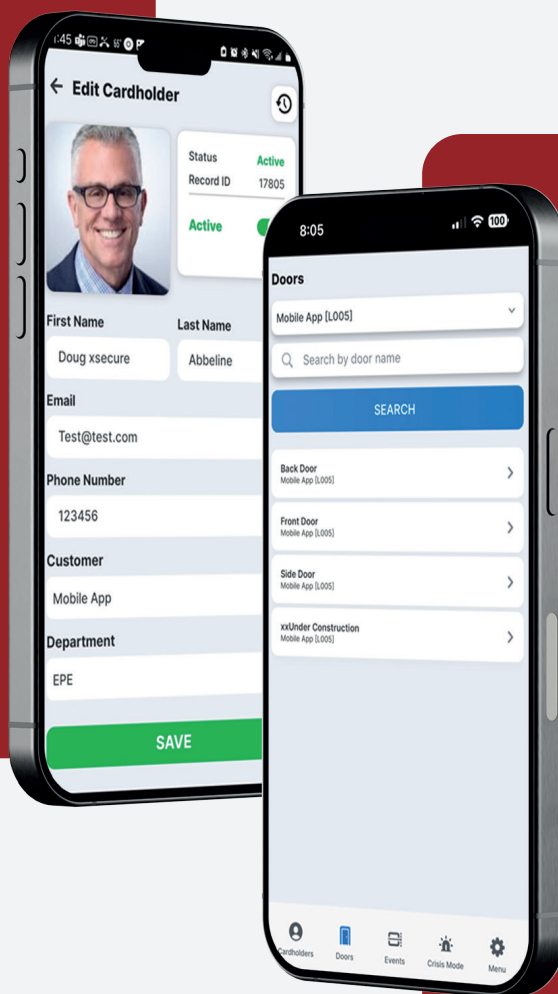

ANYWHERE ANYTIME

LAUNCHPOINT™ MOBILE APP

Overview

Take full control of your facility and personnel access with one powerful app. LAUNCHPOINT™ Mobile lets you manage doors, cardholders, and emergency lockdowns all from your phone.

Features

- **Cardholder Access:** Enable or revoke credentials remotely with one click.
- **Door Control:** Lock/unlock doors or override schedules instantly from the app.
- **Site Lockdown:** Lock down part or all of your facility during emergencies.
- **Reports:** Searchable activity logs for both cardholders and doors can be audited and sent via email.

VIDEO OVERVIEW

A web-based management system for remote administration of your video. Our integrated solution allows for seamless control of your video and access control system from any computer.

Features

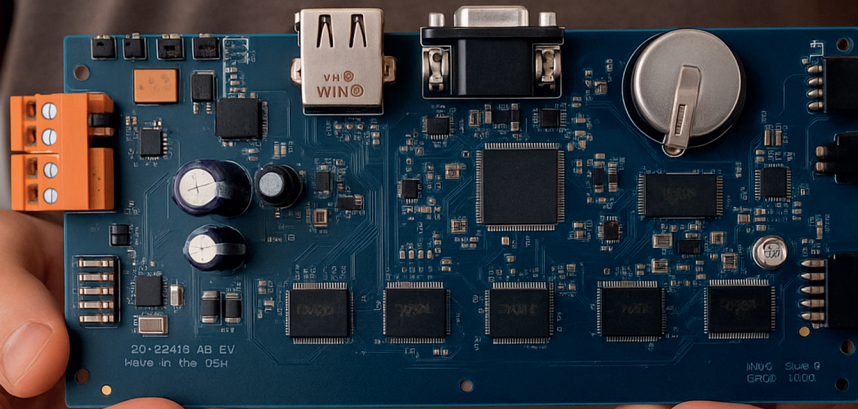

Video is recorded and stored locally for remote access. This allows for always available video even if your internet is offline.

High definition recording can also be used with little consideration for bandwidth. If a recording is needed, it can be uploaded into the cloud and shared via email. Shared video requires no logon credentials.

- Access control past events can be linked directly to video and viewed with the click of a button.
- Doors can be locked or unlocked while viewing video.
- Door alarms can call up video automatically.

BADGING OVERVIEW

Web Badging: The software is completely web-centric. Use a modern web browser to conveniently design and print badges. Our system is printer and camera agnostic supporting many different models. The flexible design allows badge printing to occur locally or remotely and can be sent into a queue for approval before printing occurs.

 **CLOUD
CONCIERGE**

WHY MOVE TO THE CLOUD

- **Ease of Access**

Access is available from any device connected to the internet. Limit conversations with the IT department, dealing with firewalls, or network setup.

- **Cost Savings**

Eliminate costly hardware, software, and maintenance by only paying a small subscription fee.

- **Security**

Traditional on-premise hardware is susceptible to theft and damage, cloud resources are locked away in secure redundant data centers.

- **Updates**

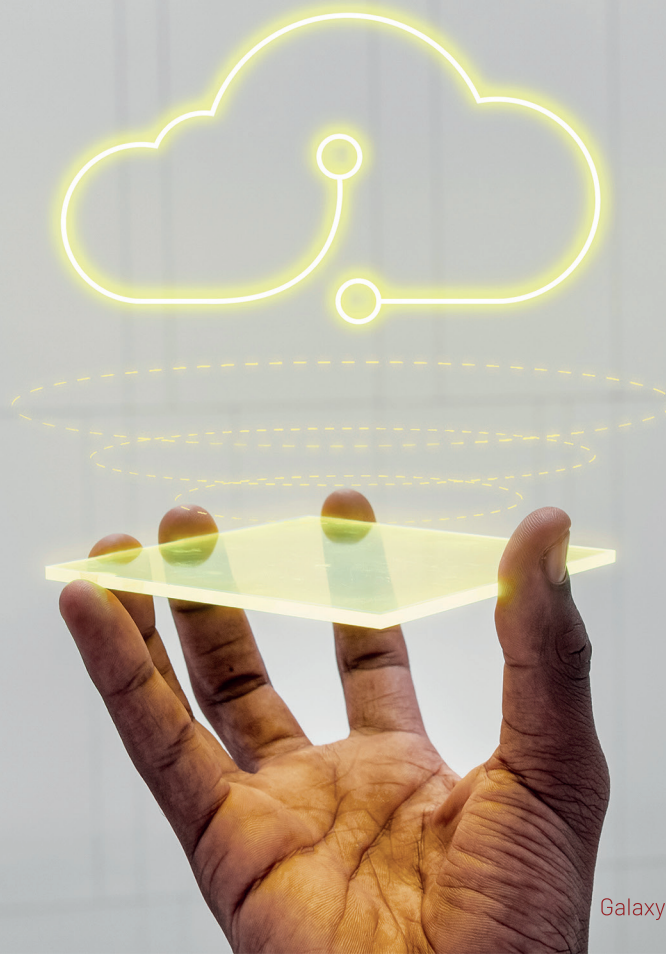

Don't waste time and money upgrading server hardware because it doesn't meet new system requirements. From a software perspective, updates take up a lot of time and resources. All software updates are taken care of in the cloud.

- **Business Continuity**

Data access and backups are vital to business continuity. The cost associated to provide data redundancy is quite high and for some not even an option. We have a redundant framework built with this in mind.

- **Employee Cost/Overhead**

Staffing budgets are often the highest cost of expenses. Having a wellqualified workforce can be a large part of the budget. Even when the costs are not a concern, training staff to maintain another system puts a greater burden on the current staff. Cloud Concierge alleviates these costs and allows for more profitability with your staffing budget so you can get back to managing your business more effectively.
